APPROACHES

LSVT LOUD™

SPEAK OUT!™

SPEECHVIVE

LSVT LOUD™

- An *INTENSIVE* speech coaching to "THINK LOUD."
- The goal is to "recalibrate" a person's speech volume through concentrated, daily practice.
- It requires 16, 40-60 minute therapy sessions in one month as well as daily home exercises during the therapy program.
- Participants are required to execute a home program daily to maintain results after completing the month-long program.
- LSVT™ recommends purchasing the LSVT Companion™ for home practice (\$299.00)
- Clients must have a high level of motivation and dedication to get the most out of this therapy technique.

The Parkinson's Voice Project

SPEAK OUT!™

- An *INTENSIVE* speech intervention focused on "Speaking with Intention."
- Consists of 12, 45 minute-long speech sessions in one month.
- Clients are required to follow a home exercise program to practice speech and cognitive skills both during speech therapy and after completing the program.
- The home exercise workbook is provided free of charge to program participants.
- Once a participant "graduates," they transition to LOUD CROWD™ group sessions for continued practice of their speech skills on an ongoing basis.

SpeechVive

- A wearable device that automatically increases speech volume.
- Uses a reflexive response to speak louder in background noise.
- When worn, all speaking activities become practice, automatically.
- Requires 4-6 speech therapy sessions in 6 months.
- No additional home exercise program required.
- A 60-day full refund provided with all devices.
